Assign New Jobs to Recruiters

Overview

This document explains how recruitment job requirements are assigned in OneForma. When a Project Manager (PM) submits a project requirement, the Hiring Manager or Recruitment Director reviews it and assigns it as a job to the relevant recruitment team. The recruitment team is then responsible for creating and managing the job posting to fulfill the project's resource needs.

User Roles and Permissions

Recruitment Director

- Receives project requirements from Project Managers (PM) and assigns those as job requirements to recruitment team leads.
- Has visibility across all recruitment teams.

Note: Recruitment directors can only see project requirements that are assigned to them by their respective PMs.

Recruiter Team Lead

- Receives job assignments from Recruitment Directors and assigns those to individual recruiters.

Note: Recruitment Team Leads can only see job assignments that are assigned to them by their respective recruitment directors.

Recruiter

- Receives job assignments from respective Recruitment Team Leads.
- Handles follow-up recruitment tasks.

Note: Recruiters can only see job assignments that are assigned to them by their respective Recruitment Team Leads.

Assign Job Requirements

Generally, job assignment can be done both automatically and manually.

Auto Assignment:

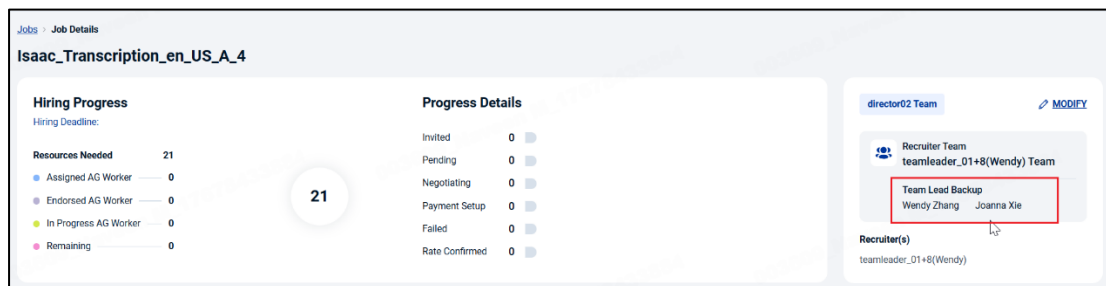

For certain projects, the application will automatically assign jobs to the recruitment managers. This auto-job assignment is entirely based on the following.

For Crowd resources, the auto-job assignment is entirely based on project and job categories.

For vendors (professionals and agencies), the auto-job assignment is entirely based on client company name and code.

Note:

- The recruitment managers have a few team leads in backup to support the recruitment in their absence. These team lead back-ups are mapped to their recruitment managers in the system. Therefore, whenever a manager is auto assigned, the corresponding team back-up is also assigned along with them and cannot be manually changed.

The following table shows the auto-assignment rulebook that the system follows.

Project Category	Resource Type	Recruitment Director & Email	First Priority Rules	Job Category	Team Lead & Email
Artificial Intelligence	Crowd	Eduardo Team Locale = all; Eduardo Perdigao & (eduardo.perdigao@centific.com)	1. Locale (Language = Chinese)(Language pair = language = Chinese) - Betty Team. 2. Resource Flag = Exper Talent - Betty Team. 3. Other jobs should be based on Job Category	Transcription	She May Hermo & (v_shemay.hermo@centific.com)

Assign Jobs

After Recruitment Director assigns jobs to team leads (TLs), TLs can then manually assign it to their team of recruiters.

Modify Teams

Both the recruitment directors and team leads can modify the job assignment--assign the job to different recruitment teams and recruiters. The same procedure is to be followed for team leaders when adding recruiters.

Notes:

- The team lead can also assign job requirement to another team lead under the same recruitment director.
- If a team lead is not defined in the assignment mapping table, the system automatically assigns the task to the Recruitment Director.
- If a team lead is specified, an assignment is made to the designated team lead.

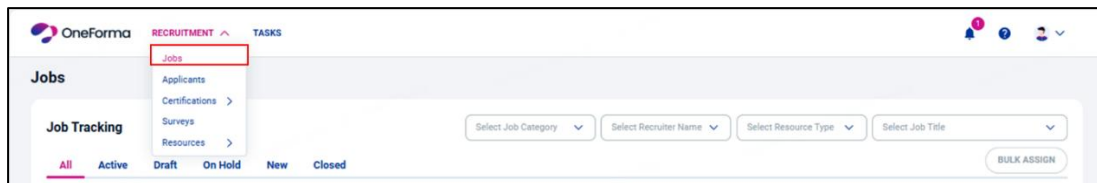

1. From the **Recruitment** drop-down, click **Jobs**.

Note: **Job Tracking** is the default page when you log in.

2. Navigate to the **New** section.

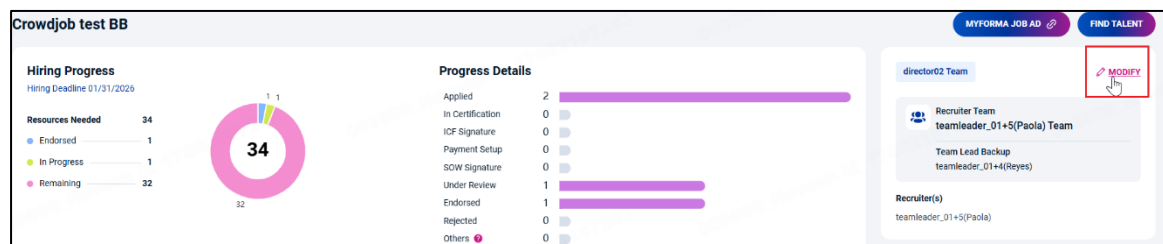

3. Filter jobs based on the following:

- **Job Category:** Annotation/Labelling, LLM, Data Collection, and so on.
- **Recruiter Name:** Name of the Recruitment Team Lead or Recruiter.
- **Resource Type:** Crowd, Professionals, Agencies.
- **Job Title:** Job title has a format- **client name + job category + locale + resource type + number**. For example,
Wukong_Annotation/Labelling_en_US_C_107

4. Click **Job Title** to open the relevant job.

5. Click **Modify**.

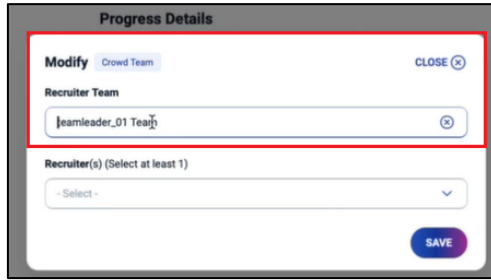

6. Select the **Recruiter Team** from the drop-down.

Note:

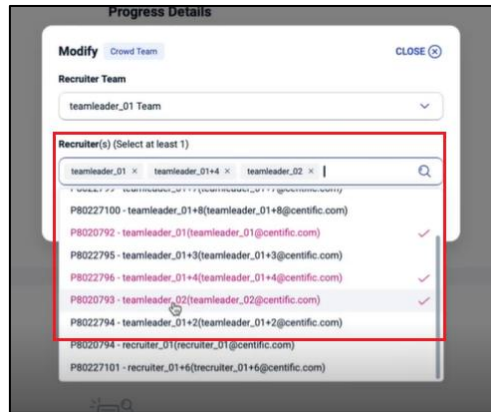

- Each resource type has dedicated recruitment teams (crowd, professionals, agencies) and jobs will be assigned based on this.
- After a job is published, each recruitment team responsible for the relevant resource type will handle their respective share of jobs.
- In certain cases, you can modify the team's resource type by assigning a vendor team to a crowd team. After changing the teams, then you can assign the job to relevant recruiters.

7. Select the relevant **Recruiter Team**.

8. Select the relevant recruiters.

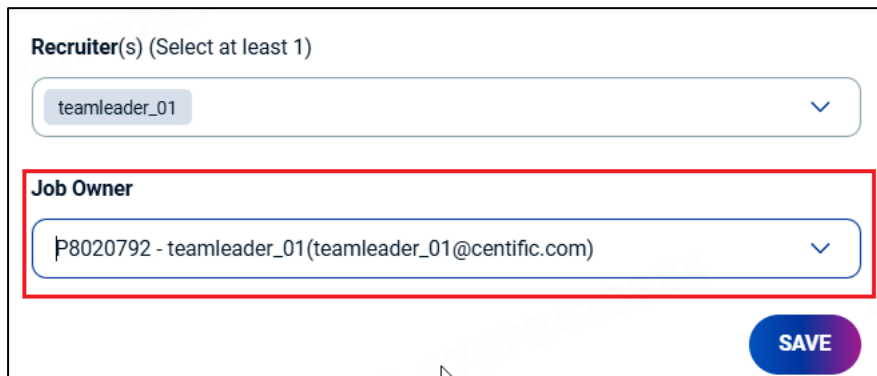

Note: You can select multiple recruiters for any given job.

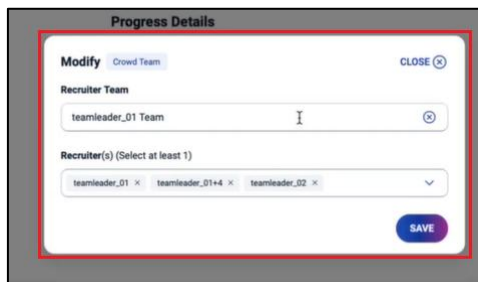

9. Modify the **Job Owner** if required.

Note:

- The initial Job Owner will be the recruiter who publishes the first draft of the job. The first draft is generally the project requirement from the PM module.
- Only the Recruitment Manager can modify the Job Owner.

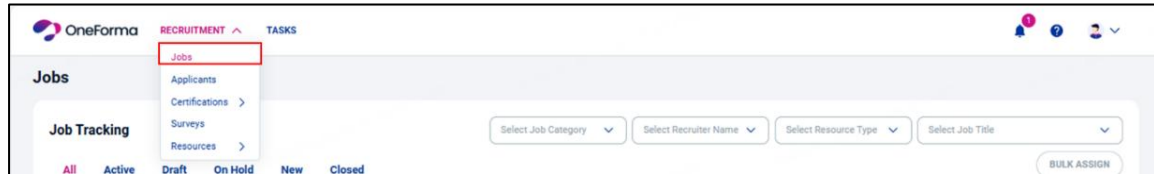

11. Click **Save**.

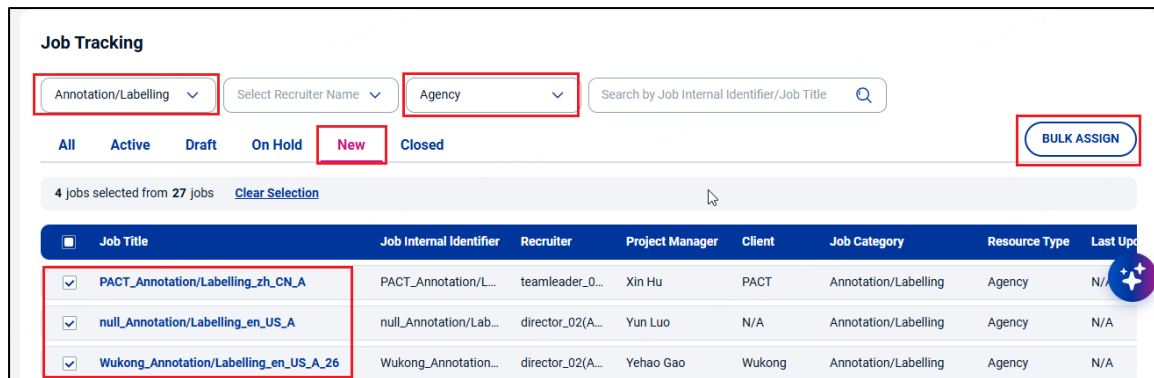

Team Leads Bulk Assigning Jobs

You can assign multiple recruiters to a job.

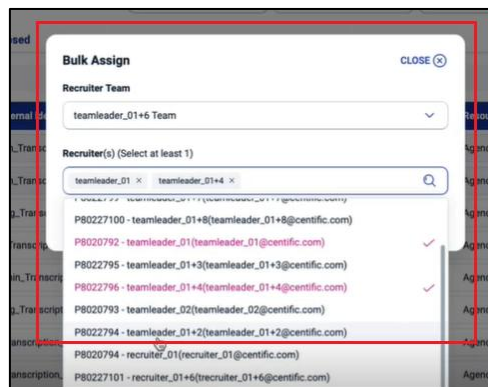

1. From the **Recruitment** drop-down, click **Jobs**.

2. Navigate to the **New** section.
3. Select the relevant **Job Category** and **Resource Type** from the respective drop-down filters.
4. Select the relevant jobs.
5. Click **Bulk Assign**.

6. Select the recruitment team from the drop-down.
7. Select the recruiters from the drop-down.

8. Click **Save**.
